Exercise 4: Read the following passage and mark the letter A, B, C, or D to indicate the correct answer to each of the questions.

truly a remarkable natural wonder, showcasing the beauty and importance of our planet's water

• Planet Earth is the third rock from the sun and the only known planet in our solar system. Unlike any other planet we know, Earth provides the perfect conditions for life to exist. From the hot deserts to the icy poles, Earth is home to a diverse range of habitats, each full of unique life forms.

These life forms can be broadly divided into two groups: flora and fauna. Flora refers to all the plant life on Earth, from the tall trees in the rainforest to the very small algae floating in the oceans. Fauna, on the other hand, includes all the animal life, from the majestic lions roaming the grassland to the microscopic insects hidden in the soil.

All these plants and animals are interconnected in a complex web called the food chain. Plants, using sunlight and nutrients, produce their own food. Herbivores, or plant-eaters, consume these plants for energy. Carnivores, or meat-eaters, then feed on the herbivores. This cycle ensures the survival of various species and maintains a healthy balance in Earth's ecosystems.

Planet Earth is truly a remarkable haven. Its diverse habitats, vibrant flora and fauna, and interconnected food chain all contribute to making it a haven for life. It's our responsibility to protect this incredible planet and ensure its continued existence for future generations.

A hundred years ago, jaguars ranged from the south-western United States to Argentina, in South America. Today their territory has **shrunk** by more than half, and they live mostly in the Amazon rainforest. And jaguars aren't the only animals losing their homes - according to the International Union for Conservation of Nature, habitat loss is the main threat to about 85 percent of all endangered plant and animal species.

Tropical rainforests cover only about 7 percent of Earth's land, but **they**'re home to an estimated half of all known plant and animal species. Most experts agree that about 80,000 acres disappear every day when trees are cut down for lumber and land is cleared for farms. Trees also play an important role in absorbing the carbon dioxide that contributes to climate change. Fewer forests mean that more greenhouse gases remain trapped in the atmosphere.

Grasslands, underwater habitats, and wetlands are also at risk of habitat loss. For instance, the World Wildlife Fund estimates that about half of the world's wetlands have disappeared in the last hundred years due to being drained for farmland or other industries. That means less space for animals to feed, breed, and raise their young.

Finding a balance between what humans and animals need will help prevent habitat destruction. Some scientists think that if we put aside half of Earth's land and water for nature, we could save up to 90 percent of all species. In the meantime, your everyday actions can build a better planet.

- 1. What can be the best title for the passage?
 - A. Jaguars: Losing Their Homes

- B. The Importance of Trees
- C. Habitat Loss: A Threat to Wildlife
- D. How to Save the Planet
- 2. The word "shrunk" in the first paragraph is closest in meaning to

B. plant and animal species

- A. grown B. expanded
- 3. The word "**they**" in paragraph 2 refers to
- D. disappeared C. reduced
- tropical rainforests
- 4. Which of the following is NOT true according to the passage? A. Jaguars now live mainly in the Amazon rainforest.
 - B. Habitat loss is a major threat to many endangered species.
 - C. Trees help to reduce climate change.
 - D. Most of Earth's land is covered by tropical rainforests.
- 5. According to the passage, what is one way humans can help prevent habitat destruction?

A. Earth's land

3 Earth Hour is an annual global campaign encouraging people and businesses worldwide to switch off
their electricity for one hour simultaneously. It originated in Australia in 2007 when 2.2 million people in
Sydney turned off unnecessary lights for an hour. Since then, it has grown into a massive global event. In
2013, millions of people in 7,000 cities and towns across the globe participated by switching off their
lights for 60 minutes at the end of March. Each year, famous landmarks and buildings such as the
Sydney Opera House, UK Parliament, Buckingham Palace, and the Empire State Building join in by
going dark for Earth Hour. In 2011, the campaign even went into space, with astronauts reducing power
on the International Space Station.
The World Wide Fund for Nature (WWF) organises Earth Hour. Andy Ridley, the executive director
of Earth Hour Global at WWF and originally from Britain, initiated the idea of Earth Hour. His aim was
to raise awareness about environmental issues by encouraging people to take positive actions to help
the planet. While switching off lights for an hour may have a small impact on energy consumption, Earth
Hour is primarily a symbolic event to make people think about the problems of climate change.
1. What is the main idea of the passage?
A. The history of the Sydney Opera House
B. The importance of saving energy
C. The impact of Earth Hour on climate change
D. A global campaign to raise awareness about environmental issues
2. The word " originated " in paragraph 1 is OPPOSITE in meaning to .
A. began B. started C. ended D. derived
3. The word "massive" in paragraph 1 could be best replaced by
A. small B. huge C. local D. brief
4. Which of the following is TRUE according to the passage?
A. Earth Hour lasts for two hours.
B. Earth Hour started in the UK.
C. Earth Hour is organized by the World Wide Fund for Nature.
D. Only a few people participate in Earth Hour.
5. The word " His " in paragraph 2 refers to
A. an astronaut B. Andy Ridley C. the executive director D. a participant
